1. What inspires you about your career?

I'm inspired by how data can solve real-world problems and make life better. It's amazing how we can take raw numbers and turn them into something meaningful that helps people. Andrew Ng inspires me because he makes learning AI and data science simple and accessible. His way of teaching has shaped how I approach learning and solving problems.

2. What's something outside of your work that you're passionate about?

I love learning new things. I enjoy reading about recent tech trends like META new glasses Orion AI Glasses and exploring new tools to keep improving my skills. Also, I am passionate about video games. Recently, I started playing fighting games like Tekken and I am passionate about indie games like Hollow Knight. I enjoy games with great stories because they let me relax and think creatively at the same time.
